Executive Summary

Global Entertainment Studios faces a critical data fragmentation challenge: while the company generates over \$12 billion in annual revenue across five business lines, its inability to identify and track customers across first-party and third-party channels prevents it from capturing the full value of its customer base. Our analysis of GES's sample dataset reveals that multi-channel customers are worth 13.5x more than single-channel customers (\$714 vs. \$53 average lifetime value), yet 51–73% of third-party transactions have no email or customer identifier attached—representing a massive untapped opportunity.

Going Merry proposes a phased, 18-month solution built on three pillars: (1) a GES Rewards program and third-party data partnerships to convert unknown buyers into identified profiles, (2) a modern cloud data stack (Fivetran, Snowflake, dbt, Segment, LiveRamp) for identity resolution and profile unification, and (3) ML-driven marketing activation that leverages unified customer data to optimize cross-channel targeting, reduce churn, and maximize lifetime value. Our gradient boosting model demonstrates that the number of channels a customer engages with is a significant predictor of lifetime value, with each additional channel adding \$86–\$249 in marginal revenue. At scale across GES's 45-million subscriber base, even conservative conversion rates from single-channel to multi-channel engagement represent hundreds of millions in incremental annual revenue.

Exploratory Data Analysis & Problem Definition

Problem Overview

Global Entertainment Studios generates over \$12 billion in annual revenue across five primary business lines: Streaming (45M subscribers), Online Merchandise Store, Studio Tour Experiences, Theatrical Releases (via cinema chains), and Consumer Products (via retail partners such as Walmart, Target, and Amazon). Despite this massive customer base, GES faces a fundamental challenge: the inability to identify, track, and understand customers as they move across these channels.

The core challenge stems from fragmented customer data. First-party sources (streaming, online store, studio tours) provide detailed customer profiles including email addresses, viewing history, and purchase behavior. However, third-party sources (theatrical box office and retail merchandise) represent the largest volume of customer interactions but provide zero customer identification. No emails, no demographics, no way to link transactions to known customers.

Current Data Landscape

Our analysis of the GES customer dataset (2,500 transactions across 363 unique customer profiles, 9 data sources) reveals the following ecosystem:

Data Source	Type	Customer ID	Email	Demographics	Quality
Streaming Platform	1st Party	Yes	Yes (100%)	84% complete	High
Online Store	1st Party	Yes	Yes (100%)	81% complete	High
Studio Tours	1st Party	Yes	Yes (100%)	83% complete	Medium
Cinema Chains (AMC, Regal, Cinemark)	3rd Party	Limited	No (0%)	None	Low
Retail (Walmart, Target, Amazon)	3rd Party	Limited	No (0%)	None	Low

Key EDA Findings

Customer Distribution by Primary Business Line

Consumer Products has the highest volume of primary customers (120), followed by Theatrical (73), Online Store (68), Streaming (56), and Studio Tours (46). Despite having the lowest customer count, Studio Tours generates the highest total revenue at nearly \$100,000, driven by an average revenue per customer of \$195.95—which is 2.3x higher than the second-highest average of \$83.55 for Streaming.

Lifetime Value: Single-Channel vs. Multi-Channel Customers

The most critical finding: 289 customers (79.6%) engage in multiple business lines, while only 74 (20.4%) are single-channel. Multi-channel customers averaged \$713.59 in lifetime value, 13.5x more compared to just \$52.78 for single-channel. The relationship between channel engagement and value accelerates at each level:

# Channels	Customers	Avg LTV	95% CI	Marginal Lift
1	74	\$52.78	\$44.19 – \$61.38	— (Baseline)
2	48	\$139.06	\$109.49 – \$168.64	+\$86.28
3	47	\$569.83	\$483.21 – \$656.45	+\$430.77
4	93	\$761.06	\$690.28 – \$831.84	+\$191.23
5 (All)	101	\$1,009.85	\$942.48 – \$1,077.21	+\$248.79

The largest marginal jump occurs between 2 and 3 channels (+\$430.77), suggesting that the transition from casual to committed cross-channel engagement is the highest-value conversion point. Customers who engage in all 5 business lines average 11 transactions and over \$1,000 in lifetime value.

Multi-Channel Customers Are 13.5x More Valuable

Average Customer Lifetime Value by Channel Depth

Data Quality & Completeness Assessment

A critical barrier to unified customer analytics is the complete absence of identifying data from third-party channels. First-party channels (Streaming, Online Store, Studio Tours) have 100% email coverage and 80–84% demographic completeness, while third-party channels (Consumer Products via retailers, Theatrical via cinema chains) have 0% email coverage and 0% demographic data. Only the Region field is available universally (100% across all channels).

This means that 51% of Consumer Products customer IDs and 73% of Theatrical customer IDs cannot be linked to any identifiable profile. These customers may already be high-value multi-channel engagers, but we have no way to know.

Temporal Engagement Patterns

Transaction volume and revenue show consistent activity throughout 2024, with no dramatic seasonal dropoffs. This suggests a stable, year-round customer base. Revenue trends show moderate month-to-month variation, presenting an opportunity to smooth demand through targeted cross-channel campaigns during lower-activity periods.

Problem Summary

Our EDA reveals five interconnected problems that our solution must address:

- **Data Blindness:** 0% email coverage on third-party channels means GES cannot identify its highest-volume customers (Consumer Products and Theatrical represent the most customers but the least data).
- **Untapped Multi-Channel Value:** Multi-channel customers are worth 13.5x more, but GES cannot identify which single-channel customers are ready to convert or which already have.
- **The 2 to 3 Channel Cliff:** The \$431 marginal lift from 2 to 3 channels is the single largest value acceleration point, but without unified profiles, GES cannot target customers at this critical threshold.
- **Wasted Marketing Spend:** Without identity resolution, GES may be advertising its streaming platform to people who already subscribe, or promoting merchandise to customers who already buy, just through unlinked third-party channels.
- **Incomplete CLV Measurement:** True customer lifetime value is systematically understated because third-party transactions cannot be attributed to known customers.

Proposed Solution: Data Integration & Marketing Strategy

Solution Overview

Our solution addresses GES's data fragmentation through three integrated pillars: (1) data acquisition through third-party partnerships and a GES Rewards program that converts unknown buyers into identified customers, (2) a modern data infrastructure using Snowflake, dbt, Segment, and LiveRamp for identity resolution and profile unification, and (3) data-driven marketing activation powered by unified customer profiles and ML models.

Data Acquisition Strategy

Third-Party Data Partnerships

The main targets for data acquisition are cinema chains and retailers. GES should approach AMC, Cinemark, and Regal to propose formal data-sharing agreements and negotiate parallel agreements with Amazon, Target, and Walmart. Each partnership agreement should include five key clauses:

- **Data Scope Definition:** For cinema chains—film titles, ticket count, date, and a hashed loyalty ID. For retailers—purchase level records tied to loyalty systems (Amazon Prime, Target Circle, Walmart+) with product types, transaction dates, and a privatized customer ID.
- **Permitted Use Definition:** Data used strictly for identity resolution and customer analytics. Data is NOT sold, NOT used for ad-targeting outside GES, and is NOT shared with third parties.
- **Privacy & Compliance Framework:** Consent confirmed between sharing partners; data transferred via clean room environments where neither party sees raw records.
- **Value Exchange:** Co-marketing opportunities, revenue sharing on data-driven campaigns, and early access to content for promotions.
- **Data Security & Retention:** Defines retention periods, tokenized storage, and breach notification procedures.

GES Rewards Program

The Rewards Program is the core of our first-party data growth strategy. It is designed to identify and convert any unknown customers.

Enrollment

GES will create a web portal where customers create an account using their email (the primary identifier for Segment profiles). Signup will require an email, password, and a consent form clearly explaining data collection and usage. GES's existing 45 million streaming subscribers will receive an email invitation to link their accounts providing a massive base before any external marketing.

Points System

Points are calibrated to fill GES's specific data gaps. Linking a movie ticket earns the most points as cinema chains provide zero customer data. Uploading a retail receipt provides a lightweight alternative to negotiated data agreements. Smaller point values are awarded for activities where GES already has first-party access such as studio tour check-ins, online merchandise purchases, and streaming activity.

Rewards

Discounts on the GES online store (driving additional first-party engagement), early access to trailers and behind-the-scenes content, and priority bookings for studio tours.

Data Flow

When a customer earns points, the event is recorded into Segment. Linking a movie ticket connects it to the rewards account—making the unknown user known. Fivetran pulls receipt data into Snowflake. Followed by dbt cleaning and standardizing the data, Segment then builds a complete profile. Finally, in Phase 3, LiveRamp uses rewards data for probabilistic matching identifying linked customers across other channels where they were previously unidentified.

Identity Resolution Methodology

Identity resolution proceeds in two stages. Phase 1 uses deterministic matching: linking records via emails and loyalty IDs, which covers the majority of first-party data. Phase 3 introduces probabilistic matching via LiveRamp, which uses device graphs, behavioral signals, and partial ID information to match users across sources where direct identifiers are unavailable.

Privacy, Compliance & Data Security

Our ability to build a unified customer view is limited by three barriers that our solution systematically addresses:

Barrier 1: Inconsistent Identifiers Across Systems

Joining streaming data to theatrical or merchandise data has no reliable matching key today. This causes double-counting, missed cross-channel behavior, and dirty segments. Our identity resolution pipeline (deterministic in Phase 1, probabilistic in Phase 3) directly solves this.

Barrier 2: Privacy Regulations (GDPR & CCPA/CPRA)

Building 360-degree customer profiles may constitute a new purpose requiring fresh consent or triggering opt-out rules. Key regulatory considerations:

- GDPR requires a clear legal basis and specific purpose before processing; limits repurposing data for new profiling.
- CCPA/CPRA is more permissive on initial collection but gives consumers strong “do not sell or share” and deletion rights, and treats “sharing” broadly to include cross-context behavioral advertising even where no money changes hands.
- Cross-border or cross-entity data transfer requires contractual safeguards and customer disclosure, and for transfers from the EU/UK to third countries, the use of approved transfer mechanisms.
- All data subject requests (access, deletion, opt-out) must be honored across the unified system.

Barrier 3: Absence of Data-Sharing Agreements

Modern privacy laws require data processing/sharing agreements that define permitted purposes, set minimum security requirements, and limit onward sharing and retention. Our proposed five-clause partnership framework satisfies these requirements. A Consent Management Platform (CMP) will be deployed on all first-party channels in Phase 1, and all third-party data flows through clean room environments.

Costs & Technical Infrastructure

Recommended Technology Stack

Our infrastructure is built on a modern, cloud-native data stack. Each component serves a specific function in the pipeline from ingestion through activation:

Component	Tool	Purpose	Est. Annual Cost
Data Pipeline	FiveTran (Standard)	Automates data movement from all sources into Snowflake	\$264,000/yr
Data Warehouse	Snowflake (Standard)	Centralized storage; brings all data into one queryable platform	~\$100,000–\$200,000/yr
Transformation	dbt (Core)	Transforms raw data into clean, analysis-ready models	Free (open-source)
CDP	Segment (Business)	Collects customer behavior; builds unified profiles; activates audiences	~\$120,000–\$180,000/yr
Identity Resolution	LiveRamp	Probabilistic + deterministic matching across systems	~\$150,000–\$300,000/yr
Clean Rooms	Snowflake Clean Rooms	Secure 3rd-party data matching without exposing raw data	Included with Snowflake
BI / Dashboards	Power BI Pro	KPI dashboards and stakeholder reporting	~\$10–20/user/mo

Consent Mgmt.	OneTrust	GDPR/CCPA consent tracking and compliance automation	~\$50,000–\$100,000/yr
---------------	----------	--	------------------------

3-Year Cost Summary

A detailed cost breakdown spreadsheet with formulas is provided in Appendix A.

Cost Category	Year 1	Year 2	Year 3
Fivetran (ETL)	\$264,000	\$264,000	\$264,000
Snowflake (Warehouse)	\$150,000	\$175,000	\$200,000
Segment (CDP)	\$150,000	\$150,000	\$150,000
LiveRamp (Identity Resolution)	\$100,000	\$225,000	\$225,000
Power BI Licensing (~20 users)	\$18,000	\$18,000	\$18,000
OneTrust (Consent Mgmt)	\$75,000	\$75,000	\$75,000
Implementation & Integration	\$200,000	—	—
GES Rewards Program Dev	\$150,000	\$50,000	\$50,000
Consulting & Advisory Fees	\$350,000	\$200,000	\$100,000
Training & Change Management	\$50,000	\$25,000	—
Contingency (15%)	\$225,450	\$177,300	\$162,300
TOTAL INVESTMENT	~\$1,732,450	~\$1,359,300	~\$1,244,300

Implementation Roadmap

Phase 1: Foundation & Quick Wins (Months 1–3)

Legal, Identity, and Infrastructure Groundwork

Workstream	Key Activities	Employees Needed	Milestone
Consent Management	Deploy CMP on streaming, retail touchpoints, and tour check-in systems	Privacy/Legal Analyst	CMP live on all 1P channels
Deterministic Matching	Link existing records via emails and loyalty IDs across 1st-party sources	Data Engineer	1P profiles unified
CDP Setup	Stand up Segment to store customer profiles and track cross-platform data	Cloud/Data Architect	Segment environment live
Cloud Infrastructure	Provision Snowflake data warehouse and initial schemas	Cloud/Data Architect	Snowflake environment live
Full EDA & Baselines	Complete exploratory data analysis; establish baseline KPIs for all metrics	Data Analyst	Baseline KPI report delivered
Compliance Audit	GDPR/CCPA gap analysis; draft data processing agreements for partnerships	Privacy/Legal Analyst	Compliance roadmap finalized

Phase 2: Integration & Partnerships (Months 4–9)

Grow First-Party Data, Begin Third-Party Partnerships

Workstream	Key Activities	Employees Needed	Milestone
Data Pipeline Automation	Deploy Fivetran to automate data ingestion into Snowflake	Data Engineer	Automated pipelines live
Data Transformation	Configure dbt models to transform raw data into clean, analysis-ready tables	Data Engineer	dbt models in production
Cinema Partnerships	Negotiate data-sharing agreements with AMC Stubs, Regal Crown, Cinemark	Partnerships Lead	First cinema partnership signed
Rewards Program Launch	Build web portal; invite 45M streaming subs; implement QR receipt scanning	Product Manager + Dev Team	Rewards program launched

Profile Activation	Connect all data feeds into Segment; build unified customer profiles	Data Engineer	Unified profiles available
ML Model Development	Build CLV prediction, churn risk, and propensity models on unified data	Data Scientist / ML Engineer	First models in production

Phase 3: Scale & Optimize (Months 10–18)

Complete Integration, Probabilistic Matching, Full Activation

Workstream	Key Activities	Employees Needed	Milestone
LiveRamp Integration	Deploy probabilistic matching using device graphs and behavioral signals	Data Engineer + Vendor	Probabilistic matching live
Retail Clean Rooms	Execute data agreements with Target, Walmart, Amazon via clean rooms	Partnerships Lead + Legal	All major retailers connected
Advanced ML & Analytics	Full reporting suite + ML models powered by cleaner Phases 1–2 data	Data Scientist / ML Engineer	Full model suite deployed
Power BI Dashboards	Deploy self-service dashboards for executives, marketing, and data quality	BI Developer	Dashboards live
Cross-Channel Marketing	Launch personalized campaigns using unified profiles and ML targeting	Marketing Analyst	First cross-channel campaign
Optimization Flywheel	A/B testing framework, model retraining, continuous KPI monitoring	Full Analytics Team	Optimization flywheel active

Risk Register

Risk	Likelihood	Impact	Mitigation
Partners refuse data sharing	Medium	Cannot build 3P cross-channel profiles	GES Rewards receipt upload as fallback; co-marketing value exchange
Low identity match rates	Medium	Incomplete profiles; understated CLV	Layer deterministic + probabilistic; iterate thresholds over time
Privacy regulation changes	Low	Architecture or consent redesign needed	Privacy-by-design from day 1; modular consent framework; ongoing legal review

Low Rewards adoption	Medium	Insufficient unknown-to-known conversion	Seed with 45M subs; high-value incentives for cinema receipt linking
3rd-party data quality issues	High	Unreliable analytics and ML outputs	Automated dbt quality tests; SLA clauses in partnership agreements

Business Impact & Financial Analysis

Revenue Impact Projections

Based on our EDA findings, we project the following revenue impact. Estimates are grounded in the observed 13.5x lifetime value multiplier for multi-channel customers and scaled to GES's 45-million subscriber base. A detailed revenue breakdown spreadsheet with formulas is provided in Appendix A.

Revenue Driver	Year 1	Year 2	Year 3
Single→Multi-Channel Conversion	\$5,000,000	\$15,000,000	\$25,000,000
2→3 Channel Acceleration	\$2,000,000	\$8,000,000	\$15,000,000
Streaming Churn Reduction	\$1,000,000	\$5,000,000	\$10,000,000
Marketing Efficiency / ROAS	\$1,000,000	\$5,000,000	\$10,000,000
Merchandise Cross-Sell	\$500,000	\$3,000,000	\$8,000,000
New Audience Acquisition (Lookalikes)	\$500,000	\$4,000,000	\$12,000,000
TOTAL REVENUE UPLIFT	\$10,000,000	\$40,000,000	\$80,000,000

At GES's scale, if just 1% of the subscriber base (450,000 customers) adds one additional channel at the observed \$86 marginal lift, that alone represents ~\$38.7M in incremental annual revenue—before accounting for the even larger 2→3 channel acceleration effect.

Cost Savings

Savings Category	Year 1	Year 2	Year 3
Marketing Waste Reduction (15–25% of spend)	\$1,000,000	\$3,000,000	\$5,000,000
Lower CAC (20–30% reduction)	\$500,000	\$2,000,000	\$4,000,000
Operational Efficiency (unified pipeline)	\$200,000	\$500,000	\$1,000,000
TOTAL COST SAVINGS	\$1,700,000	\$5,500,000	\$10,000,000

ROI Summary

	Year 1	Year 2	Year 3
Total Investment	~\$1,732,000	~\$1,359,000	~\$1,244,000
Total Value (Revenue + Savings)	\$11,700,000	\$45,500,000	\$90,000,000
Net Value	\$9,968,000	\$44,141,000	\$88,756,000
3-Year Cumulative Net Value			~\$142,865,000
Breakeven	Within 3–6 months of Phase 2		

Power BI Dashboard Template: KPI Monitoring Framework

Below is the proposed dashboard structure providing GES leadership with real-time visibility into customer analytics, cross-channel engagement, marketing performance, and data integration health.

Dashboard 1: Executive Overview

The executive dashboard provides a top-level snapshot of GES's customer base, revenue performance, and the impact of the data integration initiative.

KPI / Visual	Description	Visual Type
Total Identified Customers	Unique customers with unified profiles across all channels;	KPI Card
Avg Customer Lifetime Value	Mean CLV across all segments;	KPI Card with delta
Multi-Channel Engagement Rate	% of customers active in 2+ business lines	KPI Card with delta
Annual Revenue	Total revenue with YoY comparison	KPI Card with delta
Rewards Members	GES Rewards program enrollment	KPI Card with delta
Revenue by Business Line	Revenue breakdown: Studio Tours, Streaming, Online Store, Consumer Products, Theatrical	Horizontal bar chart

Monthly Revenue Trend	Monthly revenue with area fill showing upward trajectory post-integration	Line / area chart
CLV by Channel Depth	Average CLV by number of business lines engaged (1–5 channels) with customer counts	Horizontal bar chart
Customer Acquisition Funnel	Total Base → Identified → Rewards Enrolled → Multi-Channel → High-Value (3+ ch)	Horizontal bar / funnel

Dashboard 2: Cross-Channel Analytics

This dashboard focuses on the cross-channel engagement patterns that drive the 13.5x lifetime value multiplier, including marginal revenue lift per channel transition and customer journey paths.

KPI / Visual	Description	Visual Type
Single→Multi Conversion Rate	% of single-channel customers who added a 2nd channel this quarter	KPI Card with delta
2→3 Channel Conversion	Conversion rate for the highest-value transition	KPI Card with delta
Identity Match Rate	% of 3rd-party transactions successfully linked to known profiles via LiveRamp + Rewards	KPI Card with delta

Rewards Receipt Links	Total cinema and retail receipts linked through the GES Rewards program	KPI Card with delta
Marginal Revenue Lift	Revenue lift per channel transition	Horizontal bar chart
Cross-Sell by Journey Path	Top customer journey sequences with conversion rates and avg revenue per path	Data table
Channel Overlap Matrix	Millions of shared customers across each pair of business lines (5×5 matrix)	Matrix / heatmap table

Dashboard 3: Revenue & Incremental Impact

The revenue dashboard quantifies the dollar impact of the data integration strategy, showing incremental revenue by driver, ROI projections, and the ML model's marginal LTV estimates.

KPI / Visual	Description	Visual Type
Incremental Revenue (YTD)	Total revenue attributed to data integration	KPI Card with delta
Revenue per Identified User	identified vs unidentified	KPI Card with comparison
Incremental LTV (Multi-Ch)	Additional lifetime value above single-channel baseline	KPI Card
Marketing ROI	ROI on unified targeting campaigns	KPI Card with delta

Cost Savings (YTD)	Marketing waste reduction + lower CAC	KPI Card
Incremental Revenue by Driver	Breakdown: Channel Conversion, 2→3 Acceleration, Churn Reduction, ROAS, Cross-Sell, Acquisition	Horizontal bar chart
3-Year ROI Projection	Investment vs. Revenue Uplift vs. Cost Savings vs. Net Value vs. ROI % by year	Data table
Identified vs. Unidentified RPU	Side-by-side comparison of revenue per user with customer counts	Comparison card
Marginal LTV — ML Model Output	Channel transition, marginal lift, 95% CI, customers converted, revenue generated	Data table

Dashboard 4: Marketing Performance

This dashboard tracks campaign-level performance metrics, A/B test results with statistical significance, and marketing attribution across all touchpoints.

KPI / Visual	Description	Visual Type
Campaign ROAS	Return on ad spend by campaign type	KPI Card with delta
Customer Acquisition Cost	Blended CAC across channels; target	KPI Card with delta

Streaming Churn Rate	Monthly churn	KPI Card with delta
Conversion Rate (CVR)	Cross-channel targeted CVR	KPI Card with delta
Marketing Waste	% of spend on redundant/irrelevant impressions	KPI Card with delta
Campaign Performance Table	Spend, Revenue, ROAS, CVR, and CAC by campaign type with pre-integration baseline	Data table
A/B Test Results	Experiment name, control vs. treatment, lift %, p-value, significance status	Data table with badges
Marketing Attribution	Revenue attributed to each touchpoint: Streaming Recs, Email, Rewards, Social, Lookalikes, Tours	Vertical bar chart

Dashboard 5: Data Quality & Pipeline Health

The data quality dashboard monitors the health of the integration infrastructure, email coverage improvements, Rewards program adoption, and pipeline operational status.

KPI / Visual	Description	Visual Type
Overall Email Coverage	% of customers with email	KPI Card with delta
3P Identity Match Rate	% of 3rd-party transactions linked to known profiles	KPI Card with delta

Data Completeness Score	Average profile field coverage	KPI Card with delta
Pipeline Uptime	Combined uptime for Fivetran + Snowflake + dbt	KPI Card
Email Coverage Before vs. After	Before and after integration comparison by data source with method used	Data table
Rewards Program Funnel	Invites → Enrolled → Linked Receipt → Multi-Channel → High-Value conversion	Horizontal bar / funnel
Pipeline Health	Component status, sources connected, last sync, refresh rate, error rate for all 8 systems	Status table

Proposed Consulting Team

Massimo Arellano — Business Impact

- Led financial modeling and marketing analytics engagements, building revenue forecasting models and ROI frameworks for data-driven customer strategies. His experience spans customer lifetime value analysis, incrementality measurement, and predictive modeling across multi-channel environments. For GES, Massimo owns the marginal impact analysis and the business case that quantifies projected returns on the data integration investment.

Haley Hopkins — Lead Data Analyst

- With expertise in exploratory data analysis, customer segmentation, and lifetime value modeling, Haley specializes in diagnosing data quality issues and uncovering high-value patterns within complex datasets. Her strength lies in translating statistical findings into clear, actionable insights that equip clients to make confident, data-driven decisions.

Harrison Thomas — Compliance & Security Analyst

- Led the project's privacy, compliance, and data security work, defining how to safely build a unified customer view. Identified the three key barriers, designed the phased identity resolution pipeline, translated GDPR/CCPA requirements into system requirements, and proposed the five-clause data-sharing framework with CMP and clean room usage.

Angel Jimenez — Strategy & Partnerships Lead

- Led strategy and partnerships for the consulting team, driving growth via strategic alliances and go-to-market planning. Combined technical expertise with commercial insight to develop data informed strategies and measurable frameworks. Demonstrated cross functional leadership and stakeholder management to translate complex challenges into clear, actionable roadmaps that accelerated revenue and scaled operations.

Oliver Lin — Infrastructure & Technology Lead

- Developed data infrastructure solutions, including tools such as Snowflake for data warehousing, Fivetran for data integration, dbt for data transformation, Segment for customer data tracking, and LiveRamp for identity resolution. Worked as an Insight Analyst at Riot Games in player behavior, character popularity and game decisions.

Appendix

Appendix A: Cost & Revenue Breakdown (Excel)

A detailed Excel workbook (GES_Cost_Revenue_Breakdown.xlsx) accompanies this proposal and contains three tabs with all formulas intact:

- **Cost Breakdown:** Itemized 3-year cost projection by technology component, implementation, consulting fees, and contingency (15%). All inputs are in blue font; totals are formula-driven.
- **Revenue Impact:** Projected revenue uplift by driver (cross-channel conversion, churn reduction, ROAS, cross-sell, lookalikes) and cost savings (marketing waste, CAC reduction, operational efficiency). Includes key assumptions derived from EDA findings.
- **ROI Summary:** Pulls from both sheets to calculate Total Investment, Total Value, Net Value, and ROI % for each year and cumulative 3-year total.

Cost Summary (from Excel)

Cost Category	Year 1	Year 2	Year 3
Fivetran (ETL)	\$264,000	\$264,000	\$264,000
Snowflake (Warehouse)	\$150,000	\$175,000	\$200,000
Segment (CDP)	\$150,000	\$150,000	\$150,000
LiveRamp (Identity Resolution)	\$100,000	\$225,000	\$225,000
Power BI Licensing	\$18,000	\$18,000	\$18,000
OneTrust (Consent Mgmt)	\$75,000	\$75,000	\$75,000
Implementation & Integration	\$200,000	—	—
GES Rewards Program Dev	\$150,000	\$50,000	\$50,000
Consulting & Advisory	\$350,000	\$200,000	\$100,000
Training & Change Mgmt	\$50,000	\$25,000	—
Contingency (15%)	\$225,450	\$177,300	\$162,300
TOTAL	\$1,732,450	\$1,359,300	\$1,244,300

Revenue Projection Summary (from Excel)

Revenue Driver	Year 1	Year 2	Year 3
Single→Multi-Channel Conversion	\$5,000,000	\$15,000,000	\$25,000,000
2→3 Channel Acceleration	\$2,000,000	\$8,000,000	\$15,000,000
Streaming Churn Reduction	\$1,000,000	\$5,000,000	\$10,000,000
Marketing Efficiency / ROAS	\$1,000,000	\$5,000,000	\$10,000,000
Merchandise Cross-Sell	\$500,000	\$3,000,000	\$8,000,000
New Audience Acquisition	\$500,000	\$4,000,000	\$12,000,000
TOTAL REVENUE UPLIFT	\$10,000,000	\$40,000,000	\$80,000,000

Appendix B: Data Dictionary

Field	Type	Description
Transaction ID	String	Unique identifier (TXN000001–TXN002500)
Customer ID	String	Unique customer identifier (CUST00001–CUST00999)
